Art Unit: 1634

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-16, drawn to a cartridge for use in an open nucleic acid synthesis system, and a system comprising an open nucleic acid synthesis cartidge, classified in class 435, subclass 6.
 - II. Claims 17-25 and 33-35, drawn to a nucleic acid synthesis system and a method of synthesis, comprising a synthesis and purge component, classified in class 435, subclass 6.
 - III. Claims 26-32, drawn to a nucleic acid synthesis system comprising a reagent dispensing station, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to different systems. Both systems have different components, and therefore have different modes of operation. For example, the cartridge and system of group I are comprised of a plurality of receiving holes and O-rings. Group II, however, has a purge component and pressurized chamber, which components are not present in group I, and which components have different functions as well as different modes of operation.

Application/Control Number: 09/782,70\$

Art Unit: 1634

- 3. Inventions I and II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of groups I-II and III have different components, which have different modes of operation and different functions. For example, the cartridge and system of group I are comprised of a plurality of receiving holes and O-rings, and Group II has a purge component and pressurized chamber. Group III, however, is further made up of a reagent dispensing station, which is not found in either group I or group II, and which has a different mode of operation as it dispenses fluid. It also has a different function because it has a different component which has a unique function.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janell Taylor Cleveland whose telephone number is 703-305-0273. The examiner can normally be reached on M-F 9-6.

Application/Control Number: 09/782,70\$

Art Unit: 1634

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Jones can be reached on 703-308-1152. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and 703-872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0196.
